AIRdesign

PROJECT PROFILE / July, 2006

PROJECT: Del Sol / DEN
CLIENT: Del Sol, LC
LOCATION: Denver International Airport (DEN)
Concourse B
ARCHITECT: RCS AIRdesign / insitu DESIGN

PROGRAM:

To site adapt the Del Sol Specialty Retail concept to an existing space located in the central core of Concourse B. The approximate 1,100.0 square foot concept provided a clean, modern interpretation of Del Sol's airport retail prototype. The design concept was to utilize as much of the existing space infrastructure and design elements as possible to reduce overall build costs. Revised DEN design guidelines allowed for the incorporation of the common area structural column into the design.

SERVICES PROVIDED:

A complete RFP response Scope of Services was provided. Services included Programming, Site Evaluation, Project Budgeting, Concept Statement, Concept Design, Materials Selection, and Signage. The concept was produced as an integrated CAD model allowing for all drawings - plans, sections, elevations, and renderings - to be developed within a single CAD document.
